APPLICANT: EGOLIDGE, THOMAS R.
TITLE OF INVENTION: TREATMENT OF ACUTE CORONARY SYNDROME WITH GLP-1
FILLE REPRENCE: 089197/0398
CURRENT APPLICATION NUMBER: US/09/982,978
CURRENT PILLING DATE: 2001-10-22
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           OTHER INFORMATION: Description of Unknown Organism: Truncated form OTHER INFORMATION: of GLP-1

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence 5, Application US/09982978

Patent No. US20020146405A1

GENERAL INFORMATION:
GENERAL INFORMATION:
TITLE OF INVENTION: TREATMENT OF ACUTE CORONARY SYNDROME WITH GLP-1

FILE REFERENCE: 08918/70395

CURRENT APPLICATION NUMBER: US/09/982,978

CURRENT APPLICATION NUMBER: 08/09/982,978

PRIOR APPLICATION NUMBER: 08/09/982,978

PRIOR PILING DATE: 2001-10-12
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      PERATURE:

Sequence 6, Application US/09805507

Patent No. 6579851

GENERAL INFORMATION:
APPLICANT: COLIDGE, THOMAS R.
APPLICANT: EHLERS, MARIO
TITLE OF INVENTION: TREATMENT OF ACUTE CORONARY SYNDROME WITH GLP-1
FILE REPRESENCE: 089187/0395
CURRENT APPLICATION NUMBER: US/09/805,507
CURRENT PILING DATE: 2001-03-14
PRIOR PILING DATE: 2001-05-18
NUMBER OF SEQ ID NOS: 13
SOFTWARE: Patentin Ver. 2.1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence 125, Application US/09614847

Patent No. 5574008

GENERAL INFORMATION:
APPLICANT: Johnson, William T.
APPLICANT: Yakubu-Madus, Fatima E.
TITLE OF INVENTION: BIOLOGICALLY ACTIVE FRACKENTS OF
TITLE OF INVENTION: GLUCAGON-LIKE INSULINOTROPIC PEPTIDE
NUMBER OF SEQUENCES: 13
CORRESPONDENCES: 13
CORRESPONDENCES: 13
ADDRESSEE: Bli Lilly and Company/RSM
STREET: Lilly Corporate Center
CITY: Indianapolis
| Sequence 10, Application US/08297731

Sequence 7, Application US/0997792A

Patent No. 655521

GENURAL INFORMATION:

APPLICANT: ELI LILLY and COMPANY

TITLE OF INVENTION Glucagon-Like Peptide-1 Crystals

FILE REFERENCE: X-10242A

CURRENT APPLICATION NUMBER: US/09/997,792A

CURRENT FILING DATE: 2002-09-30

PRIOR FILING DATE: 1997-12-16

NUMBER OF SEQ ID NOS: 25

SOFTWARE: Patentin Version 3.1

Sequence 6, Application US/10055259

PUBLICATION NO. US20030091507A1

GENERAL INFORMATION:

APPLICANT: Holst, Jens J.

APPLICANT: Wilsboll, Tina

TILLE OF INVENTION: GLP-1 AS A DIAGNOSTIC TEST TO DETERMINE Beta-CELL FUNCTION AND

TILLE OF INVENTION: PRESENCE OF THE CONDITION OF IGT AND TYPE-II DIABETES

FILE REPRESENT APPLICATION NUMBER: US/10/055,259

CURRENT APPLICATION NUMBER: US/10/055,259

CURRENT PILING DATE: 2002-06-21

NUMBER OF SEQ ID NOS: 13

SOFTWARE: PatentIn version 3.1

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               RESULT 11
US-09-982-978-6

$ Sequence 6, Application US/09982978

$ Sequence 6, Application US/09982978

$ GENERAL INFORMATION:

APPLICANT: COLLIDGE, THOMAS R.

APPLICANT: EHLERS, MARIO

TITLE OF INVENTION: TREATMENT OF ACUTE CORONARY SYNDROME WITH GLP-1

TITLE OF INVENTION: 1782ATMENT OF ACUTE CORONARY SYNDROME WITH GLP-1

TITLE REFERENCE: 208187/0395

CURRENT FILING DATE: 2001-10-22

PRIOR APPLICATION NUMBER: 09/859,804

PRIOR APPLICATION NUMBER: 09/859,804

PRIOR PILING DATE: 2000-05-19

NUMBER OF SEQ ID NOS: 13

SOFTWARE: PATENTING DATE: 2000-05-19

SOFTWARE: PATENTING DATE: 2000-05-19

Patent No. 655521
GENERAL INFORMATION:
APPLICANT: BLI LILLY and COMPANY
TITLE OF INVENTION: Glucagon-Like Peptide-1 Crystals
FILS REFERENCE: X-10242A
CURRENT APPLICATION WUMBER: US/09/997,792A
CURRENT FILING DATE: 2002-09-30
PRIOR PEPTICATION NUMBER: US 60/069,728
PRIOR FILING DATE: 1997-12-16
NUMBER OF SEQ ID NOS: 25
        APPLICANT: STOUT, Jay S.
APPLICANT: STRYDOX, Daniel J.
APPLICANT: HOLMOUIST, Barton
APPLICANT: HOLMOUIST, Barton
APPLICANT: WAGNER, Fred W.
TITLE OF INVENTION: BNZYMATIC AMIDATION OF PEPTIDES
FILE REFERENCE: 089187/0162
CURRENT APPLICATION NUMBER: US/09/212,663
CURRENT PILING DATE: 1998-12-16
PRIOR PIPLICATION NUMBER: US 60/107,311
PRIOR FILING DATE: 1999-11-06
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Query Match

Sequence 6, Application US/09851738
Patent No. US2002055460A1
GENERAL INFORMATION:
APPLICANT: Coolidge, Thomas R.
APPLICANT: Cholidge, Thomas R.
APPLICANT: BAIETS, Mario R.W.
TITLE OF INVENTION: Metabolic Intervention with GLP-1 to Improve the Function of TITLE OF INVENTION: Ischemic and Reperfused Tissue
FILE REPERENCE: P03660US
FILE REPERENCE: P03660US
CURRENT FILING DATE: 2001-05-09
PRIOR PRICATION NUMBER: 09/302,596
PRIOR FILING DATE: 1999-04-30
NUMBER OF SEQ ID NOS: 13
SOFTWARE Patentin Ver. 2.0
SEQ ID NO 6
LENGTH: 28 Gaps .. 0 Length 28; Indels
